If it's your own device that you want to use after your FRP protection, you'll need to do an ADB FRP bypass. This basically involves using the ADB device to remove the lock from your Android device. There are some ADB FRP bypass devices like the GSM flasher ADB bypass FRP tool that allows you to remove the lock on your Android-based phone or tablet just by running a few commands in it. After you follow these commands, you won't be asked to sign in to your Google Account. If you don't already know, ADB is short for Android Debug Bridge, and this is a utility that allows you to communicate with your device directly from your computer. You can send commands and actions from your computer and actually perform them on your device. There are certain commands that you can use the ADB FRP bypass tool and get rid of the lock from the device. Below are the steps on how to bypass FRP's ADB including where to get the ADB toolbar. Head over to download the ADB Installer installation file from XDA tag @Snoop05. Extract files from the toolbox to a folder on your computer. Run adb-setup.exe and type Y if you want to install the ADB and fastboot drivers. Image. Install adb Again, type Y to install the device driver. It takes a few seconds to install the device drivers, and then the command window closes automatically. Image. adb installation is done power on the device normally and connect to the computer via USB cable. Make sure usb debugging mode is already enabled for Hold down Shift, right-click anywhere in the ADB folder, and then click the Open command window. Image. Open Open Open Window Remove FRP on Samsung devices using ADB commands: Type the following ADB FRP bypass command in the command prompt window one at a time, after each line, enter. adb shell am start -n com.google.android.gsf.login/ adb shell am start -n com.google.android.gsf.login.LoginActivity adb shell content insert --uri content://settings/secure ----bind name:s:user_setup_complete--bind value:s:1 Remove FRP on other brands / MTK /SPD with ADB commands: Type the following ADB FRP bypass command in the command prompt window, And press Enter after each line. adb shell content insert --uri content://settings/secure--bind name:s:user_setup_complete--bind value:s:1 When you execute commands, the FRP lock is removed from the device. This is how to use the ADB FRP bypass to remove the lock from the phone. If you go to the ADB method to remove FRP, you'll want to know that there are some limitations on the ADB commands to bypass FRP. 1. Restriction Technical knowledge, unless you know how the ADB works and you are used to it, you need to learn to use the tool to complete the task. It requires a learning curve which many users may not want to do if all they want to do is unlock their devices. Restriction 2 Unexpected errors/problems because it involves using commands, a single error when typing a command can cause some important problems. You must always be extremely careful or damage the appliance. 3. Restriction No warranty ADB gives no guarantee that the phone is actually unlocked. The only thing we can do with him is try to hope for the best. 4. checking Non User Friendly The user-interface is not the most friendly one and is actually tailored towards the geeks. Commands are too complicated and difficult to learn for most people. Restriction 5. Driver problems Sometimes, you may experience problems with your device driver, such as not re-realing your device because you don't have the correct drivers installed. A more efficient and better way to bypass the FRP lock on your device is to use a third-party software called Tenorshare 4uKey for Android. This is an amazing software that allows you to easily and quickly remove the FRP lock without hassle of any Android devices. It offers the following features: It completely bypasses FRP Lock, so you can fully control your device without restriction. Remove your Google Account from your Samsung device without a password. The Google account will be removed from samsung mobile without a password. Remove your Android password, pattern, PIN and fingerprint lock in minutes. Supports all Samsung devices, including Samsung Galaxy S10+, S10 Easy to use and risk free. With this alternative, ADB FRP bypass tool downloads are extremely simple and the following steps, you can remove the FRP lock with it. Install and start 4uKey for Android on PC/Mac. Click Google Lock (FRP). Image. To remove the Google Lock (FRP) result result, use the following Select your phone's brand and model number on the next screen and press Next. Image. Enter your phone information now, you need to put your device in Recovery Mode with the instructions below; Image. Specify recovery mode After you put your device into recovery mode, you'll be asked for more details about your phone. Enter and click Next. Image. Select PAD Following the instructions on the screen, place your phone in download mode. Wait until you download the firmware for your phone. Image. Download the firmware When you download the firmware, you start to remove the lock from your device. Image. Start removing FRP The lock will eventually be removed from your phone. Image. FRP removal successfully you have all set up. Now you can set up your phone with any Google Account. Bypassing FRP is one of the hardest things to do on an Android device. However, there are ways to do this and you can get across the lock screen without having to sign in to your old Google Account. Tenorshare 4uKey for Android is highly recommended as the best ADB FRP bypass alternative to bypass the FRP lock without a Google account or password. Password.
